

MUHAMMAD TAQI

Full-Stack Software Engineer & AI Integration Architect

Location: Pakistan **Portfolio:** nexura-m.github.io

Profile Summary: Full-Stack Software Engineer & AI Integration Architect specializing in browser-native AI integrations (WebGPU, WASM, Transformers.js), automated web builders, hybrid Android app architectures, custom 2D game engines, and developer tooling.

FEATURED PROJECTS SHOWCASE

1. AI Builder Platform (With API & Without API)

Live Link: <https://nexura-m.github.io/1/ai-builder>

WebGPU

Transformers.js

Node.js

API Integration

ZIP Exporter

Automated AI generator tool jo client-side WebGPU/WebLLM (Zero API cost) aur API-based models dono ko support karta hai. Is mein user single-file HTML/Tailwind templates ya complete Full-Stack (Frontend + Backend) ZIP archives export kar sakta hai.

2. M-BOX Advanced Web Builder

Live Link: <https://muhammادتاقي512q-oss.github.io/M-BOX/v2>

React.js

Tailwind CSS

Static Export

Client Rendering

Visual web interface builder jo production-ready code generate karta hai. Client-side rendering aur static deployment compilation ke zariye instant offline website exports faraham karta hai.

3. Vibe — Hybrid Messenger & Offline Gaming Suite

Live Link (App Download): <https://vibe1.oneapp.dev/>

Android Package (.APK)

WebSockets

Offline Game Engine

Hybrid Architecture

Real-time messaging application jise standalone Android package (.APK) mein wrap kiya gaya hai. Internet disconnect hone par built-in offline gaming engine activate hota hai jis mein 50+ lightweight games aur 4 high-tier interactive titles shamil hain.

4. Custom 2D & Stickman Game Suite

Live Link: <https://taqi.oneapp.dev/>

JavaScript ES6+

HTML5 Canvas

2D Physics Engine

Game Loop Optimization

Browser-native 2D physics aur action games jo Pure Vanilla JavaScript aur HTML5 Canvas par banaye gaye hain. Mobile aur desktop browsers par 60 FPS performance ke liye custom game loop rendering engines use kiye gaye hain.

5. Core JavaScript Developer Libraries

Live Link: <https://muhammaddtaqi.oneapp.dev/>

JS Utility Libraries

Modular Components

DOM Manipulation

State Management

Modular JavaScript utility libraries aur UI components ka collection jo DOM manipulation, state management, aur web applications ki development ko fast karta hai.

TECHNICAL SKILLS OVERVIEW

Core Languages & Frameworks: JavaScript (ES6+), React.js, Node.js, Python, HTML5, CSS3, Tailwind CSS.

AI & Local Engines: WebGPU, WASM, Transformers.js, WebLLM, Ollama Integration, Prompt Engineering.

Deployment & Tools: Web-to-APK Packaging, Git/GitHub, GitHub Pages, Netlify, Docker.
